

Histogram of a RAW image

3 buttons top right show clipped highlights in red, clipped mid-tones yellow, clipped shadows blue

Adjust Exposure and Blackpoint sliders to just get rid of those colours.

Then the histogram has been brought within the limits and you have the most data to work with when the image is developed.

You cannot recover outlying data from non-RAW.

Drag to pan view.

Mean: 79.76
Std. Dev.: 75.28
Median: 54
